3 Plans and sections submitted by the Executive Engineer are requested for proper scrutiny of the estimate

The open channel proposed seems objectionable but apparently there is no money available for providing anything better

2 The catchment area of the Kolle is only $\frac{3}{8}$ ths of a square mile and is not therefore a very promising source of supply. As the work will be of some use, the estimate may be sanctioned

(1) Plans and estimates have been checked and corrected.

It will be necessary to put in a small regulator at the off-take of the channel close to the lifting dam across the weir halla, otherwise any surplus over the tank weir is likely to rush into the tiny channel and damage it. Provision for this has been inserted in the estimate.

The small tank which is proposed to be utilised for the water supply is in a commanding situation and is in very fair order. The only thing needed is an outlet for the water now locked up in the katte. The estimate makes provision for this.

It is a point for settlement by the local officers whether this utilisation of the tank will not deprive cattle of drinking water when they browse on the hills in summer.

H Hughes Campbell

the water of the Jogaffanagudda tank unfit for potable purposes, and the Health Sanitary Officers has condemned the project chiefly on other grounds he has suggested instead the acquisition of certain Kapule well & its surrounding land & the sinking of more wells for providing the town with good drinking water. The Municipal Board however considers the bad condition of the jogaffanagudda tank water to be due to the tank having been in disuse hitherto, and that the proposed work if carried out, will not only improve the condition of the water in the tank but also increase the supply of water in the existing wells. In these circumstances they urge that the project should be carried out in preference to the sinking of wells which is considered to cost more. It is also learnt that the proposed work does not inconvenience Cattle as they have now access to the pudda for grazing purposes there being no proper way to climb over the hills. The Dy. Com.r submits the views of the Municl. Board, and states that the necessity of the cost of the proposed project may be met from the Closing balances of the Municipality.

Serial No 15

From the Chief Engr
No B 6713 d 21-5-19

Forwards for favour of orders an estimate amounting to Rs 1300 for the water supply to Molakalmuru Town

had not the papers Bad MK

55 The financial position of the Molakalmuru Municipality as per budget estimate of the current year is as follows -

Opening balance -	Rs 1300
Receipts Special -	Rs 50
- do - normal -	Rs 2478
Total -	Rs 3,828
Expenditure Special -	Rs 350
- do normal -	Rs 2,443
Closing balance -	Rs 1,035

56 The financial condition of the Municipality is so poor that the initial cost of the project i.e Rs 1300 cannot be borne by it The income is little over Rs 2,800 & the expenditure is nearly the same The annual cost of maintaining the hand & distribution is estimated to come to about Rs 500/ This, however, is to

Jud
From Levy Quarter Master
To Collector for orders

01
6/6 Sd Water supply & Industrial scheme for Jud is a very old subject and has been under correspondence all these years.

From the Extract (Flag C) of Sd C's letter, it is seen that the D C recommended that the Scheme may be abandoned as the Mulky was unable to bear any portion of the cost the estimate of Rs 23000/- sd by the D C has now been reduced to Rs 13000/- and the Sanc Bd approve of the Scheme

in connection with the for water supply

But the Financial condition of the Mulky is anything but opulent The Scheme is (no) doubt a cheap one and the maintenance charges are not high. If the local people subscribe half the cost then Govt may grant the other half leaving the Mulky Taluqdars its taxation to meet the maintenance charge Otherwise the Scheme will have to be definitely ordered to be given up.

Conl 71-10
SL-1

Sir,

I have the honor to state that much difficulty is being experienced by the townspeople of Mallalwan for want of a good supply of drinking water especially during summer and it is therefore proposed to supply water to the town from a hill head situated near the Jogappa Swadda close to the town

2 The estimate got up by the P W Department for the work, is herewith submitted together with a detailed report received from the Executive Engineer in the matter

3 The Municipal Board of the town was asked to point out the source in the budget from which the cost in question could be met The members say that the municipality is too poor to bear the full cost, but that it can afford to contribute ⅓ 500/- for the work They have further resolved that Government be approached vide a praya to kindly sanction the balance the amount viz Rs 470/- from Provincial funds or Local funds General

(2

4 As the financial condition of the municipality does not admit the above charge being met from this source I recommend that Govt will be pleased to move the Government to make sanction a grant-in-aid of Rs 500/-.

5- The Commissioner record and report with Mukhtarnama taken and Sub-Divl report No 1130 dated 2nd June 1910, given cover to the Board's resolution as it submitted herewith for perusal and kind return when no longer required

I have the honor to be,
Sir,
Your most obedient servant.

K. R. Sreenivasaiengar Esquire, M. A.,
Officiating Secretary to the Government of
His Highness the Maharaja of Mysore,
General and Revenue Departments,
Bangalore.

Sir,

Adverting to your docket No. 4238/Ml.71-10-4 dated the 4th December 1911 re, the proposal to construct a sluice to Jogappana gudda tank with a view to supply water therefrom to the town of Molakalmuru, I have the honor to state that it is seen from the report of the Vice-President and the Mahazar of the townspeople that as there is no proper way to climb over the hills, no cattle can go there to browse either during Summer or at any other period of the year, but that they are taken for grazing purposes to the neighbouring Hire-Adavi and other forests. The utilization of the tank in question for the water supply scheme does not therefore in any way inconvenience the cattle.

As regards the project itself, the opinion of the District Sanitary officer was called for. Letter No. 1655 dated 29th May 1912 containing that officer's views about the scheme is herein enclosed together with its enclosures. It will be seen therefrom that he does not approve of the project as it is stated to be defective on sanitary grounds

The sanitary officer states that the tank being full of silt is in a very insanitary condition and its water has been pronounced by the Chemical Examiner to the Government of Mysore to be unfit for drinking purposes He further adds that it is not advisable

to replenish the wells in the town whenever they run dry, through the lower tank proposed to be constructed at the foot of the hill, as such a supply will be liable to easy contamination.

The sanitary officer while thus decrying the scheme recommends that, instead of its being undertaken, a well belonging to a barber which is reported to contain good water may be acquired together with the land and some more wells sunk there with a view to provide the town with pure drinking water.

The views of the District sanitary officer were communicated to the Municipal Board of the town and they were asked to get up the necessary plans and estimates for sinking new wells as well as for acquiring the barber's well as suggested by the Sanitary officer

The Board have considered the two questions in all their aspects,- i,e, whether to supply water to the town from Jogappanagudda or by means of wells as proposed by the Sanitary officer and they are unanimous in deciding that the former scheme itself may be taken up

It is reported that the scheme suggested by the Sanitary officer involves an outlay of Rs 2,035/- together with the cost of acquisition etc and even then, it provides for sinking only one additional well The financial condition of the Municipality does not admit of such a heavy expenditure being incurred for this alternative scheme Further, it would work as a hardship if the valuable garden land is acquired together with the Kapile well which belongs to a poor widow of a barber and on which alone she and her children are mainly depending for maintenance

Besides, the Board are of opinion that the water in the tank over the hill has become stagnant simply because it has remained unused for a long time and that

therefore in its present condition might have been found insanitary and unfit for drinking purposes It is considered that the water thereof may become fit for potable purposes also, in case the silt be removed and the water used by the people. Even if the supply of water in the tank unfortunately proves otherwise after the project is completed, it is thought that it (the project) would not be a useless concern. The townspeople say that they have been pressing so much over the water supply, as the difficulty, they are subjected to in getting water in sufficient quantity even for ordinary domestic purposes, is greater than that for drinking water.

The town of Molakalmuru is noted for the manufacture of silk cloths The majority of the townspeople who are weavers require a good quantity of water for washing silk, preparing colour and other domestic purposes and so the consumption of water for these purposes may be said to be greater. The people can not be expected to get water required for all these purposes from the wells proposed to be sunk in the barber's field, which is at a distance of a furlong from the town.

It is seen from the petition of the inhabitants of the Molakalmuru town and also from the Board's resolution that they are all in favour of the Jogappanagudda scheme being carried out, so that the supply of water for domestic purposes may be equal to the demand for about 7 or 8 months in a year, and that for the remaining 4 or 5 months also they can get good supply of water from the wells in the town They expect that after the scheme is completed there wells may not dry up during Summer, as at present, since there will be underground percolation from the reservoir at the foot of the hill close by. If the water to be supplied be found unfit for drinking purposes, they say that they will get water for drinking only from the existing barber's well which is said to contain pure water and which has never failed.

For these reasons, I also support the views of the Municipal Board and recommend that Government may be pleased to sanction the project, amounting to Rs 1,000/- of supplying water

(12

tp Moalakalmuru town from Jogappanagudda together with a grant-in-aid of Rs 500/-

The moiety of the cost to be paid from the Municipal funds will be met from the closing balance at the credit of the Municipality. If found necessary, the Board will be asked to postpone the budgetted works to be carried out during the current year and make the necessary funds available for putting the project on hand at once.

The Vernacular papers ending with the Vice-President's reports Nos. 457 and 218 dated 19th December 1911 and 20th August 1912 respectively giving cover to the Board's resolution etc are herewith submitted.

The file of papers received with the docket under reply are also resubmitted

The favour of early orders on the subject is solicited

I have the honor to be,

DIARY No 5559

To

19/2-19/3
TION R. Sreenivasiengar Esquire, M. A.,
...E No. 71-10 Officiating Secretary to the Government of
SERIAL No. 7 His Highness the Maharaja of Mysore,
Bangalore.

S I R,

Adverting to your docket No 2872/MI 71-10-6 dated the 5th October last in the matter of water supply to Molakalmuru town, I have the honor to state that the cost of removing the silt of the tank is estimated at Rs 5800/- as per enclosed estimate It is not possible to state whether by removing the silt the water in the tank will become good for drinking purposes

2 As the tank has water in it now the depth of silt cannot be correctly estimated but taking the average depth of the silt to be one yard the present estimate is prepared The cost of removal of the silt may even be greater in case the silt is found to be of greater depth The poor financial condition of the municipality may not, I think, admit of bearing the heavy expenditure of removing the silt

3 Since the water of the tank over the hill is proposed to be let into the wells of the town, the water so introduced into them may perhaps be found fit for drinking purposes also, by constant use instead of being allowed to stagnate in the tank as at present Even if it proves otherwise, the townspeople are reported to be in favor of the Jogappanagudda scheme as the demand for water for ordinary domestic purposes is greater than that for drinking purposes Moreover the wells in the town may not dry up as there will be underground percolation even if the tank were to dry up during years

of failure of rainfall The silt in the tank may also be removed later on as funds become available.

4 In these circumstances, I request that the project prepared by the D. P. W may kindly be sanctioned

5 The enclosures received with the above are returned herewith

Extract from the note of Inspection by the First Councillor on 8th January 1914 relating to Molakalmuru taluk.

MOLAKALMURU TALUK

Molakalmuru is a small taluk of two hoblis but its distance from headquarters makes it indispensable. The town which is at the foot of some rocky hills, gets hot during summer There is also difficulty for water often experienced In some of these taluks, the water is so bad that guinea worm (rare in other places) is a frequent disease There is a tank on one of the hillocks from which water might be supplied by gravitation, but it is said to give only an insufficient supply The project, however, is worth investigating and carrying out if practicable

Offg. Secretary to Government,

General and Revenue Departments, Bangalore

Sir,

With reference to correspondence ending with your No 4556 dated the 10th December 1914, regarding a suitable scheme for water supply to the Molakalmuru town, I have the honor to state that a report called for from the Superintending Engineer, Northern Circle, is still awaited He has been requested to expedite its submission

2. A copy of a note drawn up in this office and submitted to the Dewan with this office No D 642 dated the 16th December 1914, is attached for information

I have the honor to be,

Sir,

Your most obedient servant,

For Chief Engineer of

Note on the Water Supply to Molakalmuru

++

Molakalmuru is situated at the base of a hill The old Polygars have constructed four small ponds or kattes to secure water supply to men and cattle. One of these is situated to the East, the second one to the West, while the third and fourth lie to the North-East and North-West respectively of the town- (vide tracing from topo sheet) All the four intercept the drainage from the hill slopes They have all been silted up badly by the accumulated washings of centuries

2 The people seem to get great store by the Katte No 3 which is situated in a commanding position and can supply water by gravitation, but as its catchment is only 7/8 of a square mile and the supply available about 8 or 10 units in the most favourable years, this source is no dependable

3 The next best and most suited to the capabilities of the place is the reservation of Gundlur tank to the South-West The catchment is 5 01 square miles and capacity 61 units

Water can be lifted to the top of the hillock right end (R L 2053) and can then be led by means of pipes 2" or 3" in diameter to cisterns in the neighbourhood of the town (R L 2020) This is likely to cost about Rs 25,000 and is recommended for investigation adoption

4. Construction of a new tank across two combu hallas at the road crossing opposite Royapur and ar

(29

for pumping or simple pumping from wells at Chinnahgri river below Siddaynkote will be very costly and would require about Rs.1,00,000 for a complete system of water supply.

MYSORE P W DEPARTMENT

CENTRAL OFFICE

Bangalore, 24th May 1919

1 estimate for Rs. 13,000
1 report.
2 plans.
1 copy of resolution.
6 tracings.

From

C. CADAMBI, ESQUIRE,
Chief Engineer of Mysore,
Public Works Department.

To

B. RAMASWAMAIYYA, ESQ., B.A., B.L.,
Secretary to Government,
Revenue Department,
BANGALORE

Sir,

With reference to correspondence ending with this office No. B.6057 dated the 3rd May 1919, I have the honor to forward herewith, for favour of orders, an estimate amounting to Rs. 13,000 for the water supply to Molakalmuru Town.

2. The report of the Executive Engineer accompanying the estimate explains the provisions made therein

3. The consumption of water per head now assumed is only 5 gallons as it is not feasible to construct a reservoir of larger capacity. The Municipality should therefore make all possible arrangements to regulate the supply of water only for drinking purposes and prevent waste

Water required for cleaning, washing and industrial purposes should be procured from other sources.

4. A copy of the resolution of the Central Sanitary Board approving the project is also forwarded.

(31

8. It might be mentioned here that no provision has been made in the estimate either for deepening the Barbers' well or sinking a new well. This has to be arranged for by the Municipality.

I have the honor to be,

Sir,

Your most obedient servant,

R.V. Sundara...,

FOR CHIEF ENGINEER OF MYSORE

R.V.K/BO-8.

To - The Chief Engineer.

I am forwarding herewith a Consolidated statement prepared in this office regarding the different stages at which the several water supply schemes in the State are pending, I am directed to request you to be so good as to scrutinize the Schemes prepared and to have prepare fresh projects prepared wherever necessary with the usual reference to their application dated

[3]

Conditions - Water supply schemes involving the construction of special reservoirs filter beds and installation of pumping machinery, are very expensive and most towns & minor municipalities are unable to meet even the maintenance charges. I am, therefore, to observe that until & unless a less expensive system can be devised, there is not much hope of improving the water supply in mofussil towns and that the schemes proposed for the Taluk head-quarter stations should not be as elaborate & costly as those proposed for District Head Quarters

2 A general report on the above question may be submitted at an early date

3 The Consolidated Statement may kindly be returned along with the report called for

I have, &c
